

Feature Manager

For cPanel & WHM version 64

(Home >> Packages >> Feature Manager)

- Overview
- Predefined feature lists
- Create and edit a feature list
- Delete a feature list
 - Selectable features
- Additional documentation

Overview

This interface allows you to edit feature lists, which you can assign to packages that you apply to cPanel accounts. Feature lists provide or prevent access to specific cPanel features.

Predefined feature lists

cPanel & WHM includes the *default*, *disabled*, and *Mail Only* feature lists by default.

- If you are a reseller who only owns a mail server, use the *Mail Only* feature list.
- If you disable a feature in the *default* feature list, the system disables the feature by default for all of the users on your server. To override this configuration, create a new list and assign it to your users.

If you disable a feature in the *disabled* feature list, the system disables the feature for all of the users on your server. You **cannot** override this feature list with a new list.

Notes:

- To **enable** a feature in the *default* feature list, select the feature's checkbox.
- To **disable** a feature in the *disabled* feature list, select the feature's checkbox.

Create and edit a feature list

To create a new feature list or edit an existing feature list, perform the following steps:

1. Choose one of the following options:
 - To create a new feature list, enter the desired feature list name in the *Add a new feature list* text box and click *Add Feature List*.

Note:

Choose an easy-to-remember name so that you can properly assign it.

- To edit an existing feature list, select the desired feature list from the *Manage feature list* menu and click *Edit*.
2. Select checkboxes to enable features, or deselect checkboxes to disable features.

Note:

To **disable** a feature in the *disabled* feature list, select the feature's checkbox.

3. Click *Save*.

Delete a feature list

To remove an existing feature list, perform the following steps:

1. From the *Manage a feature list* menu, select the feature list to remove.
2. Click *Delete*.

Selectable features

Warnings:

- This table lists the cPanel interfaces for the default cPanel theme (Paper Lantern). If you use the another theme for the cPanel interface, these interfaces and locations may vary slightly.
- Some cPanel features may require that you enable additional settings in order for them to function. Read each feature's documentation for additional information.
- Various settings and customizations can **add** or **remove** features from this interface. You may see additional features that display a *Legacy* label if they correspond to a deprecated theme, or a *Plugin* label, if they correspond to a specific plugin. The following list is **not** canonical for every server.

On most cPanel & WHM servers, you can select the following features:

Feature	Associated cPanel interface or feature
<i>Addon Domains</i>	<i>Feature Manager</i> interface (<i>Home >> Domains >> Addon Domains</i>)
<i>Address Importer</i>	<i>Feature Manager</i> interface (<i>Home >> Email >> Address Importer</i>)
