Modify Upgrade Multiple Accounts

For cPanel & WHM version 66

(*Home >> Multi Account Functions >> Modify/Upgrade Multiple Accounts*)

Overview

This interface allows you to simultaneously change the attributes of multiple accounts to use the same settings.

> **Important:**
> When you modify an account, the system overrides any custom settings that you assign to the account. For example, if you directly assigned a bandwidth quota to an account and then use this interface to modify the bandwidth quota for multiple accounts, the system overwrites the account's bandwidth setting. You **must** directly assign the amount of bandwidth again.

Modify an account's specifications

To modify an account's specifications, perform the following steps:

1. Select the accounts that you wish to modify.

   > **Note:**
   > The section on the right side of the interface allows you to search for accounts by user, domain, reseller or owner, package, or cPanel theme. Enter the search criteria in the available text box on the right, and then click *Select Matching Users* to select users or *DeSelect Matching Users* to deselect users.

2. Select the configuration options that you wish to change from the menus below.
   - *Reseller* — Specifies the owner or reseller who owns the account.
   - *Theme* — Specifies the account's cPanel theme.
   - *Start Date* — Specifies the account's creation date.
   - *Language* — Specifies the account's display language.

     > **Note:**
     > If the cPanel user selects a language through cPanel's *Change Language* interface *(Home >> Preferences >> Change Language)*, you **cannot** change the language here. To change the language, you **must** log in to the cPanel account.

   - *Package* — Specifies the hosting package. Packages set the account's limitations for bandwidth, disk space, and other resources.
3. Click *Change*.
