## Description

This function queries values that the system in a directory's `.leechprotect` configuration file.

### Warning:

cPanel API 1 is **deprecated**. Do not use this function. Instead, we **strongly** recommend that you use the following newer functions:

- **UAPI (recommended)** — *None*.
- **cPanel API 2** — `LeechProtect::setup` — This function configures Leech Protection on a cPanel account.

### Important:

In cPanel & WHM version 76 and later, when you disable the `WebServerRole`, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

## Examples

### ▼ LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$configure_leech =  
$cpanel->apil('LeechP  
rotect', 'setup',  
array('public_html', '  
uri', 'uri') ); //  
Call the function.
```

### Note:

For more information, read our [Guide to the LiveAPI System](#).

## Function information

## About this module

The `LeechProtect` module allows you to protect your site's images from inclusion on external sites.

#### LiveAPI Perl Module

```
my $cpliveapi =  
Cpanel::LiveAPI->new(  
); # Connect to  
cPanel - only do this  
once.  
my $configure_leech =  
$cpliveapi->api('LeechProtect', 'setup',  
['public_html', 'uri',  
'uri']); # Call the  
function.
```

#### Note:

For more information, read our [Guide to the LiveAPI System](#).

#### cPanel Tag System (deprecated)

#### Warning:

In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel  
Module="LeechProtect:  
:setup (  
$FORM('dir', 'item', 't  
ype'))">
```

cPanel API 1 accesses information about cPanel accounts.

**Warning:** cPanel API **deprecated**. We **strongly** recommend cPanel API or UAPI instead.

### ▼ Command Line

```
cpapil
--user=username
LeechProtect setup
public_html uri uri
```

**Notes:**

- You **must** URI-encode these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the `cpapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapil` command:

```
/usr/local
/cpanel/bin/cpapil
```

### ▼ Output (HTML)

*This function returns output that varies dramatically based on the input parameters that you use.*

## Parameters

Parameter	Type	Description	Possible values	Example
dir	string	<b>Required</b> The file's directory.	A valid directory path, relative to the user's home directory.	public_html
item	string	<b>Required</b> The item to query in the configuration file.	<ul style="list-style-type: none"> <li>• email</li> <li>• kill</li> <li>• numhits</li> <li>• uri</li> </ul>	uri

- cPanel API 1 Modules - LeechProtect — The LeechProtect module allows you to protect your site's images from inclusion on external sites.
- cPanel API 1 Functions - LeechProtect::disable — This function disables leech protection for a directory.
