FTP Connections

(cPanel >> Home >> Files >> FTP Connections)

Overview

This interface displays information about current connections to your FTP server and it allows you to terminate those connections.

View current FTP sessions

The interface includes the following information about connections to your FTP server:

Column	Description	Example
User	The username for the authenticated FTP account.	*user*
Logged in From	The host through which the user connected to your FTP server.	*ns1.example.com*
Login Time	The FTP session's start time and date.	*Fri Jul 19 13:19:20 2013*
Status	The FTP session's status.	*IDLE*
Process ID	The FTP session's process ID.	*13926*
Actions	The actions that you perform with on the FTP session: • *Disconnect* — Allows you to disconnect the FTP session.	

To refresh the list of FTP sessions, click *Reload.*

Disconnect users from an FTP session

If you suspect malicious activity from a user, or if the user is idle, you can disconnect their FTP session.

To disconnect a user from an FTP session, perform the following steps:

1. Click *Disconnect* next to the FTP session that you wish to disconnect.
2. To verify that the server disconnected the session, click *Reload.*
