Description

This function lists blocked IP addresses.

Warning:

cPanel API 1 is **deprecated**. Do not use this function. Instead, we **strongly** recommend that you use the following newer functions:

- **cPanel API 2** — `DenyIp::listdenyips` — This function lists blocked IP addresses.

Important:

In cPanel & WHM version 76 and later, when you disable the `WebServer` role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$list_denyip =  
$cpanel->api1('DenyIp',  
'listdenyip');  
// Call the function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

Function information

About this module

The `DenyIp` module manages access to IP addresses.

About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

LiveAPI Perl Module

```
my $cpliveapi =  
Cpanel::LiveAPI->new(  
); # Connect to  
cPanel - only do this  
once.  
my $listdenyip =  
$cpliveapi->api('DenyIp', 'listdenyip');  
# Call the function.
```

Note:
For more information, read our [Guide to the LiveAPI System](#).

cPanel Tag System (deprecated)

Warning:
In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the LiveAPI system to call the cPanel APIs.

```
<cpanel  
Module="DenyIp::listdenyip(  
$FORM('matchvalue', 'method', 'msgpart', 'dest') )">
```

Warning:
cPanel API deprecated. We strongly recommend cPanel API or UAPI instead.

Command Line

```
cpapil
--user=username
DenyIp listdenyips
```

Notes:

- You **must** [URI-encode](#) values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to UAPI](#) documentation or run the `uapi --help` command.
- If you run CloudLinux™, you **must** use the full path of the `uapi` command:

```
/usr/local
/cpanel/bin/uapi
```

Output (Text)

```
btw10.10.10.10\n10.10.10.11\n10.10.10.0/24\n
```

Note:
Use cPanel's *API Shell* interface (*cPanel >> Home >> Advanced >> API Shell*) to directly test cPanel API calls.

Parameters

This function does not accept parameters.

Returns

A newline-separated list of IP addresses and CIDR-format ranges that the website blocks.
