

Raw FTP Log Download

(WHM >> Home >> Account Functions >> Raw FTP Log Download)

- [Overview](#)
- [Download the log](#)
- [Additional documentation](#)

Overview

This interface allows you to download an FTP server's raw access logs. The raw access logs are plain text files that list every connection that visitors made to a particular domain's FTP server, as well as the files that visitors uploaded and downloaded.

Note:

This interface is only available when you enable FTP services on your server. For more information, read our [Service Manager](#) documentation.

Download the log

To download the raw access log, perform the following steps:

1. Select the domain for which you wish to download the log and click *Download*.

Note:

The system compresses the log for download.

2. Click the link to download the log.
3. Use a plain text reader to open and view the log.
