

# WHM API 1 Functions - modsec\_get\_configs

## Guide to WHM API 1

- Return Data
- Filter Output
- Sort Output
- Paginate Output
- Output Columns
- Call cPanel API 2 and UAPI

## Description

This function lists ModSecurity™ configuration files. The system stores the configuration files in the `/usr/local/apache/conf/modsec_vendor_configs` directory.

### Important:

In cPanel & WHM version 76 and later, when you disable the `WebServer` role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

## Examples

- Account Restoration
- restore\_modules\_summary
- restore\_queue\_activate
- restore\_queue\_add\_task
- restore\_queue\_clear\_all\_completed\_tasks
- restore\_queue\_clear\_all\_failed\_tasks
- restore\_queue\_clear\_all\_pending\_tasks
- restore\_queue\_clear\_all\_tasks
- restore\_queue\_clear\_completed\_task
- restore\_queue\_clear\_pending\_task
- restore\_queue\_is\_active
- restore\_queue\_list\_active
- restore\_queue\_list\_completed
- restore\_queue

### JSON API

```
https://hostname.example.com:2087/cpsess#####/json-api/modsec_get_configs?api.version=1
```

### XML API

```
https://hostname.example.com:2087/cpsess#####/xml-api/modsec_get_configs?api.version=1
```

## Function information

## About WHM API 1

WHM API 1 performs functions and accesses data in WHM.

### Notes:

Addon Domains

Command Line

```
whmapil  
modsec_get_configs
```

**Notes:**

- You **must** URI-encode values.
- For more information and additional output options, read our [Guide to WHM API 1](#) documentation or run the `whmapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `whmapil` command:

```
/usr/local  
/cpanel/bin/whmapil
```

**Note:**

Use WHM's *API Shell* interface (*WHM >> Home >> Development >> API Shell*) to directly test WHM API calls.

## Parameters

This function does not accept parameters.

## Returns

Return	Type	Description	Possible values	Example
configs	array of hashes	An array of hashes of information about ModSecurity configuration files.	This array includes the <code>config</code> , <code>vendor_id</code> , and <code>active</code> returns.	
config	string	The configuration file's location.  The function returns this value in the <code>configs</code> array.	A valid path, relative to the <code>/usr/local/apache/conf</code> directory.	<code>modsec_vendor_configs/MyVendor/one.conf</code>
vendor_id	string	The vendor's unique short name.  The function returns this value in the <code>configs</code> array.	A valid string.	<code>MyVendor</code>
