

Service Status

For **cPanel & WHM version 60**

([Home](#) >> [Server Status](#) >> [Service Status](#))

Overview

This feature displays a list of the server's monitored services.

- Items that are currently functional display a green icon ().
- Items that are **not** currently functional display a red icon ().

Service Status

This section of the interface lists all of the server's monitored services, their current version, and their status.

Note:

Select the services that you wish to monitor in the [Service Manager](#) interface ([Home](#) >> [Service Configuration](#) >> [Service Manager](#)).

cPanel & WHM servers monitor the following services by default:

- *cpanellogd*
- *cpdavd*
- *cpsrvd*
- *cron*
- *exim*
- *httpd*
- *ipaliases*
- *mysql*
- *pop*
- *queueprocd*
- *rsyslogd*
- *spamd*
- *sshd*

cPanel DNSONLY servers monitor the following services by default:

- *cpsrvd*
- *cron*
- *mysql*
- *named*
- *queueprocd*
- *sshd*

System Information

This section of the interface lists the server's load, the current memory used, and the current swap space used, and the status for these items.

Disk Information

This section of the interface lists the disk devices, their mount points, their current usage, and their status.
