Description

This function checks whether the server uses [Spam Filters™](#) to autodelete spam. The function configures the `spam_auto_delete` and `spam_auto_delete_score` cPanel variables with the results. You can use these variables in `cpanelif` tags.

Warning:

cPanel API 1 is **deprecated**. We **strongly** recommend that you **do not use** cPanel API 1. However, no equivalent function exists in our newer APIs.

Examples

LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$spam_autodelete =  
$cpanel->apil('Email'  
,  
'has_spam_autodelete'  
) ); // Call the  
function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

Function information

About this module

The Email module modifies cPanel email account settings.

About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

LiveAPI Perl Module

```
my $cpliveapi =  
Cpanel::LiveAPI->new(  
); # Connect to  
cPanel - only do this  
once.  
my $spam_autodelete =  
$cpliveapi->apil('Email',  
'has_spam_autodelete'  
); # Call the  
function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

cPanel Tag System (deprecated)

Warning:

In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel  
Module="Email::has_spam_autodelete() ">
```

Warning:
cPanel API deprecated. We **strongly** recommend cPanel API or UAPI instead.

Command Line

```
cpapil
--user=username Email
has_spam_autodelete
```

Notes:

- You **must** URI-encode these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the `cpapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapil` command:

```
/usr/local
/cpanel/bin/cpapil
```

Output (none)

This function does not return output.

Parameters

This function does not accept parameters.

Returns

This function does not return output.

- cPanel API 1 Functions - Email: addforward — This function adds a domain-level email forwarder.
- cPanel API 1 Functions - Email: addlist — This function adds a Mailman mailing list.
