Description

This function cancels the suspension action put in place by the UAPI `Email::suspend_outgoing` function for outgoing mail for an email account.

> **Note:**
> To suspend an email account and reject **all** outgoing mail, use the UAPI `Email::suspend_outgoing` function.

> **Important:**
> In cPanel & WHM version 76 and later, when you disable the `MailSend` role, the system **disables** this function. For more information, read our How to Use Server Profiles documentation.

Examples

cPanel or Webmail Session URL

```
https://hostname.example.com:2083/cpsess##########/execute/Email/unsuspend_outgoing?email=username%40example.com
```

> **Note:**
> This example calls the UAPI function via a cPanel session. For more information, read our Guide to UAPI documentation.
