## Description

This function retrieves a list of full server backups.

### Warning:

cPanel API 1 is **deprecated**. Do not use this function. Instead, we **strongly** recommend that you use the following newer functions:

- **UAPI (recommended)** — `Backup::list_backups` — This function lists the account's backup files.
- **cPanel API 2** — `Backups::listfullbackups` — This function displays pending and completed backups in the `/home` directory.

### Important:

In cPanel & WHM version 76 and later, when you disable the `FileStorage` role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

## Examples

### LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$list_backups =  
$cpanel->api1('Fileman',  
'listfullbackups');  
// Call the function.
```

### Note:

For more information, read our [Guide to the LiveAPI System](#).

## Function information

## About this module

The `Fileman` module provides access to file functions.

**Note:**  
This function is a *File Management* feature.

## About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

#### LiveAPI Perl Module

```
my $cpliveapi =  
Cpanel::LiveAPI->new(  
); # Connect to  
cPanel - only do this  
once.  
my $list_backups =  
$cpliveapi->apil('Fileman',  
'listfullbackups'); #  
Call the function.
```

**Note:**  
For more information, read our [Guide to the LiveAPI System](#).

#### cPanel Tag System (deprecated)

**Warning:**  
In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel  
Module="Fileman::list  
fullbackups ()">
```

**Warning:**  
cPanel API deprecated. We strongly recommend cPanel API or UAPI instead.

#### ▼ Command Line

```
cpapil
--user=username
Fileman
listfullbackups
```

##### Notes:

- You **must** URI-encode these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the `cpapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapil` command:

```
/usr/local
/cpanel/bin/cpapil
```

#### ▼ Output (HTML)

```

## Parameters

This function does not accept parameters.

- cPanel API 1 Functions - Fileman:htmleditor — This function opens a file in the HTML editor.
- cPanel API 1 Functions - Fileman:killdir — This function deletes a directory.
