

# The Quota File Systems Configuration File

[Overview](#)

[Edit the /var/cpanel/noquotafs file](#)

[Example](#)

[Additional documentation](#)

## Overview

The `/var/cpanel/noquotafs` file allows you to specify file system types that you wish to exclude from cPanel & WHM's quota system. This is useful if, for example, your setup does not allow certain file system types to use quotas, or you do not wish to use quotas on specific file systems.

Each line of the `/var/cpanel/noquotafs` file specifies an excluded file system type.

## Edit the /var/cpanel/noquotafs file

Use a text editor to edit the `/var/cpanel/noquotafs` file.

### Notes:

- List each file system type on a separate line.
- This file is **not** case-sensitive.

## Example

To exclude the NFS and ext3 file system types from the quota system, the `/var/cpanel/noquotafs` file would resemble the following example:

```
nfs
ext3
```
