## Description

This function retrieves all of a certificate's available information.

## Examples

### ▼ cPanel or Webmail Session URL

```
https://hostname.example.com:2083/cpsess#####/execute/SSL/fetch_cert_info?friendly_name=TestCert
```

▼

#### Note:

This example calls the UAPI function via a cPanel session. For more information, read our [Guide to UAPI](#) documentation.

### ▼ LiveAPI PHP Class

```
$cpanel = new CPANEL(); // Connect to cPanel - only do this once.  
  
// Fetch information about certificate TestCert  
$SSL_fetch_cert_info = $cpanel->uapi('SSL', 'fetch_cert_info', array('friendly_name' => 'TestCert', ));
```

#### Note:

For more information, read our [Guide to the LiveAPI System](#).

## Function information

## About this module

The SSL module manages certificates, certificate requests, and keys.

## About UAPI

UAPI accesses and modifies data for cPanel accounts.

### ▼ cPanel Template Toolkit

```
<!-- Fetch information about certificate TestCert -->
[% data = execute(
  'SSL',
  'fetch_cert_info', {
    friendly_name =>
    'TestCert' } ); %]
[% FOREACH q = data %]
    <p>
        [% q %]
    </p>
[% END %]
```

#### Note:

For more information, read our [Guide to Template Toolkit](#) documentation.

### ▼ Command Line

```
uapi --user=username
SSL fetch_cert_info
friendly_name=TestCert
```

#### Notes:

- You **must** [URI-encode](#) values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to UAPI](#) documentation or run the `uapi --help` command.
- If you run CloudLinux™, you **must** use the full path of the `uapi` command:

```
/usr/local
/cpanel/bin/uapi
```

### ▼ Output (JSON)

- UAPI Functions - SSL: `fetch_cert_info` — This function retrieves the best-available certificate for the domain.
- UAPI Functions - SSL: `fetch_cert_info` — This function retrieves all of a certificate's available information.

## Parameters

**Note:**  
You **must** include one of the following parameters:

Parameter	Type	Description	Possible values	Example
id	string	The certificate's ID.	A valid string.	<a href="#">Click to view...</a> example_com_cb497_a394d_1397249671_d1272da8f13a1fd837493a5ad1f0a0f3
friendly_name	string	The certificate's human readable name.	A valid string.	TestCert

## Returns

Return	Type	Description	Possible values	Example
subject.commonName_ip	string	The IP address.	A valid IP address.	192.168.0.1
is_self_signed	Boolean	Whether the certificate is self-signed.	<ul style="list-style-type: none"><li>1 — Self-signed.</li><li>0 — Not self-signed.</li></ul>	1
