Introduction

The `LeechProtect` module allows you to protect your site's images from inclusion on external sites.

Important:

In cPanel & WHM version 76, we introduced server profiles and roles. When you enable a non-*Standard Node* server profile, the system **disables** API calls associated with that profile's disabled roles.

Available functions

- [cPanel API 1 Functions - LeechProtect::disable](#) — This function disables leech protection for a directory.
- [cPanel API 1 Functions - LeechProtect::enable](#) — This function enables leech protection on a directory.
- [cPanel API 1 Functions - LeechProtect::setup](#) — This function queries values that the system in a directory's `.leechprotect` configuration file.
- [cPanel API 1 Functions - LeechProtect::showpasswdfile](#) — This function retrieves the `passwd` file's location.
- [cPanel API 1 Functions - LeechProtect::status](#) — This function displays a directory's leech protection status.

cPanel API 1 Basics

About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

Warning: cPanel API 1 is deprecated. We strongly recommend using cPanel API 2 or UAPI instead.
