

SSL Certificate Signing Request

For cPanel & WHM version 60

(Home >> Security >> SSL/TLS)

Overview

This feature allows you to generate, view, or delete a certificate signing request (CSR). You can also view and edit current descriptions and encoded private keys and decoded private keys.

Generate a new CSR

Warning:

You **must** have or generate a key before you generate a signing request.

To generate a CSR, perform the following steps:

1. Under the Generate a New Certificate Signing Request (CSR) heading, select the key from the Key menu.
 - When you select a key, the *View & Edit* option appears. Click the link to view and edit the information for your private key.
 - If the desired key does **not** appear in the menu, use the *Generate a new 2,048 bit key* option to generate new key. You can also add a new private key to the *Private Keys* section of the *SSL/TLS* interface (Home >> Security >> SSL/TLS).
2. Enter the required information in the text boxes below the *Key* menu.
3. Click *Generate*.

Note:

Your hosting provider may require additional information.

Remove a CSR

To delete a CSR, perform the following steps:

1. Under the *Certificate Signing Requests on Server* heading, click the *Delete* link in the *Actions* column next to the host. A new interface will appear.
2. Click *Delete CSR* to confirm. A message of success or failure will appear.
 - If you do **not** wish to delete the CSR, click *Cancel*.

Edit and view details about a CSR

To edit a description or view a CSR, perform the following steps:

1. Under the *Certificate Signing Requests on Server* heading, click *Edit & View* in the *Actions* column next to the host. A new interface will appear that displays the description, the encoded CSR, and the decoded CSR.
2. Enter any desired changes in the *Description* text box.
3. Click *Update Name*. A message of success or failure will appear next to the *Description* text box.
