Overview

This feature allows you to assign a package to a new account. A package defines the account's limitations. For example, a package determines how much disk space the new account can use or how much data the new account can transfer.

Important:

You **must** choose a package option before you attempt to save the new account.

Package

Use the *Choose a Package* menu to assign an existing package. If you are unsure of the limitations that a package will assign, hold your cursor over the

icon to view the package's configuration.

Select package options manually

To edit package options manually, select the *Select Options Manually* checkbox. The following additional options will appear:

- The *Save manual settings as a Package* checkbox.
- The *Manual Resource Options* section.
- Additional options in the *Settings* section.
- The *Create a New Account - Package Extensions* section, if you selected a package that uses package extensions from the *Choose a Package* menu.

Save manual settings as a Package

To save your manually-selected options as a new package, perform the following steps:

1. Select the *Save manual settings as a Package* checkbox. The *Package Name* text box and *Feature List* menu will appear.
2. Enter a name for the new package in the *Package Name* text box.

Important:

You **must** enter a package name in this text box.

3. Select a feature list from the *Feature List* menu.

Note:

Feature lists define which cPanel features are available to cPanel users. To edit or create a feature list, use WHM's *Feature Manager* interface (*Home >> Packages >> Feature Manager*).
