

# Change Style

(cPanel >> Home >> Preferences >> Change Style)

## Overview

Use this interface to choose a style in order to customize the cPanel interface's appearance.

### Notes:

- If you are a reseller and wish to customize a style, read our [Guide to cPanel Interface Customization - cPanel Style Development](#) documentation.
- Hosting providers can use the `/scripts/modify_accounts` script to change the theme and associated style for multiple accounts. For instructions to apply styles via the command line, read our [Guide to cPanel Interface Customization - Apply Styles](#) documentation.

For the purposes of cPanel, Inc.'s products and documentation, we use the following terms:

- **Branding** — Branding modifies the cPanel interface in order to match your company's logo and brand.
  - Branding changes include updates to image assets or text labels.
  - For more information, read our [Branding](#) documentation.
- **Includes** — UI includes add custom content to the header or footer of the cPanel interface (but not the WHM interface).
  - You can create UI includes for specific cPanel interfaces, or global UI includes that display on all of cPanel's interfaces.
  - For more information, read our [UI Includes](#) documentation.
- **Plugin** — A plugin modifies an interface's features or functionality, and it may also include changes to the interface's appearance.
  - You can write plugins for the cPanel or WHM interfaces.
  - You can use the [cPanel Style Guide](#) to ensure that your interfaces match the appearance of standard cPanel interfaces.
  - For more information, read our [Guide to cPanel Plugins](#) documentation.
- **Style** — A style uses CSS, images, and other assets to modify the appearance of the entire cPanel interface **without** changes to its functionality or features.
  - You can create and apply styles to an entire server or a specific reseller's accounts, or you can create them for distribution.
  - For more information, read our [cPanel Style Development](#) documentation.
- **Theme** — A theme applies an overlay on the skeletal framework for all of the interfaces.
  - cPanel & WHM currently ships with one default cPanel theme and one default WHM theme.
  - The Webmail and login interfaces also use themes.

## Change the style

To change your interface's style, click *Apply* for the desired style. The interface will refresh with the newly-selected style.

To set a style as the default style, click *Set as Default* for the desired style.

### Important:

When you set a style as the default style, the system does **not** automatically apply that style to your account. You must **also** click *Apply* to apply that style for your account.
