## Introduction

The `WebmailApps` module displays information about the account's Webmail applications.

### Important:

In cPanel & WHM version 76, we introduced server profiles and roles. When you enable a non-*Standard Node* server profile, the system **disables** API calls associated with that profile's disabled roles.

## Available functions

- [cPanel API 2 Functions - WebmailApps::listwebmailapps](#) — This function retrieves information about an account's Webmail applications.
