

Change Multiple Sites' IP Addresses

(WHM >> Home >> Multi Account Functions >> Change Multiple Sites' IP Addresses)

Overview

This interface allows you to change the IP addresses of multiple accounts simultaneously. This feature is useful, for example, when a reseller transfers an account to another reseller.

Change multiple IP addresses

To simultaneously change multiple IP addresses, perform the following steps:

1. Select the checkboxes for the domains for which you wish to change IP addresses.
2. Click *Change IPs of Selected Accounts*.
3. Select the new IP address for each domain from the menu.
4. Click *Change IPs*.

Warning:

Because nameservers across the Internet do not update their DNS information instantly, changes to IP addresses may temporarily prevent some visitors from the ability to access that domain's website.
