Description

This function unsuspends a reseller account.

Warning:

This function **also** unsuspends **all** of the cPanel accounts that the reseller owns.

Examples

▼ JSON API

```
https://hostname.example.com:2087/cpsess#####/json-api/unsuspendreseller?user=username
```

▼ XML API

```
https://hostname.example.com:2087/cpsess#####/xml-api/unsuspendreseller?user=username
```

Function information

About WHM API 0

WHM API 0 performs functions and accesses data in WHM.

Warning: WHM API 0 is deprecated. We strongly recommend using WHM API 1.

- delip
- listips
- setsiteip
- deliver_mail_queue
 - deliver_messages_mail_queue

Command Line

```
whmapi0
unsuspendreseller
user=username
```

Notes:

- You **must** URI-encode values.
- For more information and additional output options, read our [Guide to WHM API 0](#) documentation or run the `whmapi0 --help` command.
- If you run CloudLinux™, you **must** use the full path of the `whmapi0` command:

```
/usr/local
/cpanel/bin
n/whmapi0
```

Output (JSON)

```
