

_cPanelAPI2About

cPanel API 2 accesses and modifies data for cPanel accounts.

Notes:

- These functions may require a feature list. To view the available feature lists on a cPanel server, view WHM's [Feature Manager](#) interface.
- Unless you call this API via the WHM API, you **must** use the appropriate cPanel ports (2082 or 2083). You can also call some functions via cPanel's Webmail ports (2095 or 2096).
