## Description

This function creates a new directory.

### Warning:

cPanel API 1 is **deprecated**. Do not use this function. Instead, we **strongly** recommend that you use the following newer functions:

- **UAPI (recommended)** — *None*.
- **cPanel API 2** — `Fileman::mkdir` — This function creates a directory.

### Important:

In cPanel & WHM version 76 and later, when you disable the FileStorage role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

## Examples

### LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$create_directory =  
$cpanel->apil('Filema  
n', 'fmmkdir',  
array('public_html',  
'directory')); //  
Call the function.
```

### Note:

For more information, read our [Guide to the LiveAPI System](#).

## Function information

## About this module

The Fileman module provides access to file functions.

### Notes:

- The Fileman module provides access to file functions.
- The Fileman module provides access to file functions.

#### LiveAPI Perl Module

```
my $cpliveapi =  
Cpanel::LiveAPI->new(  
); # Connect to  
cPanel - only do this  
once.  
my $create_directory  
=  
$cpliveapi->apil('Fileman', 'fmmkdir'  
['public_html',  
'directory']); # Call  
the function.
```

#### Note:

For more information, read our [Guide to the LiveAPI System](#).

#### cPanel Tag System (deprecated)

#### Warning:

In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel  
Module="Fileman::fmmk  
dir (  
$FORM('dir','file'))"  
>
```

cPanel API 1 accesses information about cPanel accounts.

**Warning:** cPanel API **deprecated**. We **strongly** recommend [cPanel API](#) or [UAPI](#) instead.

### Command Line

```
cpapil
--user=username
Fileman fmmkdir
public_html directory
```

#### Notes:

- You **must** URI-encode these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the `cpapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapil` command:

```
/usr/local
/cpanel/bin/cpapil
```

### Output (plaintext)

```
Created
/home/USER/DIRECTORY
```

- cPanel API 1 Functions - Fileman:html editor — This function opens a file in the HTML editor.
- cPanel API 1 Functions - Fileman:killdir — This function deletes a directory.

## Parameters

Parameter	Type	Description	Possible values	Example
dir	string	<b>Required</b> The new directory's parent directory.	Any valid directory name on the server.	public_html
file	string	<b>Required</b> The new directory name.	Any valid directory name.	directory

## Returns

This function returns a message of success with the new directory's path from the `/home` directory.
