

# WHM API 1 Functions - modsec\_edit\_rule

## Guide to WHM API 1

- Return Data
- Filter Output
- Sort Output
- Paginate Output
- Output Columns
- Call cPanel API 2 and UAPI

## Description

This function stages edits to a ModSecurity™ rule. The system does **not** save changes directly to the configuration file. Instead, it stages the changes to the configuration file's `.STAGE` file (for example, for the `example.conf` file, the system stages changes in the `example.conf.STAGE` file).

### Important:

In cPanel & WHM version 76 and later, when you disable the `WebServerRole`, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.
