Description

This function removes a redirect from an account's `.htaccess` file.

Warning:

cPanel API 1 is **deprecated**. Do not use this function. Instead, we **strongly** recommend that you use the following newer functions:

- **UAPI (recommended)** — `Mime::delete_redirect` — This function removes a redirect from a domain.
- **cPanel API 2** — `None`.

Important:

In cPanel & WHM version 76 and later, when you disable the `WebServer` role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

▼ LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$del_redirect =  
$cpanel->api1('Mime',  
'del_redirect',  
array('directory/redi  
rect-me', 'example.com  
, '/home/user/public_  
html/example.com') );  
// Call the function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

Function information

About this module

The `Mime` module manages redirections.

About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

▼ LiveAPI Perl Module

```
my $cpliveapi =
Cpanel::LiveAPI->new(
); # Connect to
cPanel - only do this
once.
my $del_redirect =
$cpliveapi->apil('Mime', 'del_redirect',
['directory/redirect-me', 'example.com', '/home/user/public_html/example.com'] ); #
Call the function.
```

Note:
 For more information, read our [Guide to the LiveAPI System](#).

▼ cPanel Tag System (deprecated)

Warning:
 In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel
Module="Mime::del_redirect(
$FORM('src', 'domain',
'docroot') )">
```

Warning:
 cPanel API deprecated. We **strongly** recommend cPanel API or UAPI instead.

Returns

This function does not return output.

- [cPanel API 1 Functions - Mime::del_mime](#)
— This function removes an Apache MIME type handler from an account's .htaccess file.
- [cPanel API 1 Functions - Mime::linkable](#)
— This function checks whether hotlink protection is enabled.
