Description

This function sets the PHP version for the account.

Warning:

cPanel API 1 is **deprecated**. We **strongly** recommend that you **do not use** cPanel API 1. However, no equivalent function exists in our newer APIs.

Important:

In cPanel & WHM version 76 and later, when you disable the `WebServerRole`, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

▼ LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$php_version =  
$cpanel->apil('Htacce  
ss', 'setphppreference'  
, array('5') ); //  
Call the function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

Function information

About this module

The `Htaccess` module manages functionality within the `.htaccess` file.

About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

LiveAPI Perl Module

```
my $cpliveapi =
Cpanel::LiveAPI->new(
); # Connect to
cPanel - only do this
once.
my $php_version =
$cpliveapi->apil('Hta
ccess','setphppreferen
ce',[ '5' ] ); # Call
the function.
```

Note:
For more information, read our [Guide to the LiveAPI System](#).

cPanel Tag System (deprecated)

Warning:
In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel
Module="Htaccess::set
phpreference(
$FORM('php_version')
)">
```

Warning:
cPanel API **deprecate**
. We **strongly**
recommen
cPanel API
or
UAPI
instead.
