- restore_queue_is_active
- restore_queue_list_active
- restore_queue_list_completed
- restore_queue

Description

This function validates the system's current Exim configuration.

Important:

In cPanel & WHM version 76 and later, when you disable the MailSend role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

JSON API

```
https://hostname.example.com:2087/cpsess#####/json-api/validate_current_installed_exim_config?api.version=1
```

XML API

```
https://hostname.example.com:2087/cpsess#####/xml-api/validate_current_installed_exim_config?api.version=1
```

Function information

About WHM API 1

WHM API 1 performs functions and accesses data in WHM.

Command Line

```
whmapil  
validate_current_installed_exim_config
```

Notes:

- Unless otherwise noted, you **must** URI-encode values.
- For more information and additional output options, read our [Guide to WHM API 1](#) documentation or run the `whmapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `whmapil` command:

```
/usr/local  
/cpanel/bin/whmapil
```

Output (JSON)

```
{  
  "data": {  
    "message": "
