Description

This function restores a backup to a directory.

Warning:

cPanel API 1 is **deprecated**. We **strongly** recommend that you **do not use** cPanel API 1. However, no equivalent function exists in our newer APIs.

Important:

In cPanel & WHM version 76 and later, when you disable the FileStorage role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$restore_files =  
$cpanel->apil('Fileman',  
'restorefiles',  
array('public_html',  
file-myfile.tar'));  
// Call the function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

Function information

About this module

The Fileman module provides access to file functions.

Notes:

- The Backup feature
- The restore feature

LiveAPI Perl Module

```
my $cpliveapi =
Cpanel::LiveAPI->new(
); # Connect to
cPanel - only do this
once.
my $restore_file =
$cpliveapi->apil('Fil
eman', 'restorefiles'
['user',
'file-myfile.tar']); #
Call the function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

cPanel Tag System (deprecated)

Warning:

In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel
Module="Fileman::rest
orefiles (
$FORM('dir','file'))"
>
```

cPanel API 1 accesses information about cPanel accounts.

Warning: cPanel API **deprecated**. We **strongly** recommend cPanel API or UAPI instead.

<code>dir</code>	<i>string</i>	The directory into which to uncompress the backup file. This parameter defaults to the user's /home directory.	Any valid directory name.	<code>public_html</code>
<code>file</code>	<i>string</i>	Required The database.	Any valid database name. Important: This parameter's values must start with <code>file-*</code> .	<code>file-myfile.tar</code>

Returns

This function returns a series file paths to the restored files.

- [cPanel API 1 Functions - OptimizeWS::loadoptimizersettings - bytes](#)
— This function returns a cPanel account's free disk space quota.
- [cPanel API 1 Modules - Fileman — The Fileman module provides access to file functions.](#)
