- restore_queue_clear_completed_task
- restore_queue_clear_pending_task
- restore_queue_is_active
- restore_queue_list_active
- restore_queue_list_completed
- restore_que

Description

This function creates or modifies an Access Control List (ACL).

> **Warning:**
> We **strongly** recommend that WHM users create and edit ACLs and ACL privileges through WHM's *Edit Reseller Nameservers and Privileges* interface (*WHM >> Home >> Resellers >> Edit Reseller Nameservers and Privileges*).

Examples

JSON API

```
https://hostname.example.com:2087/cpsess##########/json-api/saveacllist?api.version=1&acllist=my_acl_list&acl-all=1
```

XML API

```
https://hostname.example.com:2087/cpsess##########/xml-api/saveacllist?api.version=1&acllist=my_acl_list&acl-all=1
```

Function information

About WHM API 1

WHM API 1 performs functions and accesses data in WHM.

Notes:

- So
  ro
  us
- Yo
  mu
  us
  20
  or
  20
) to

Command Line

```
whmapi1 saveacllist
acllist=my_acl_list
acl-all=1
```

Notes:

- Unless otherwise noted, you **must** URI-encode values.
- For more information and additional output options, read our Guide to WHM API 1 documentation or run the `whmapi1 --help` command.
- If you run CloudLinux™, you **must** use the full path of the `whmapi1` command:

```
/usr/local
/cpanel/bi
n/whmapi1
```

Output (JSON)

```
{
  "metadata": {
    "version": 1,
    "reason": "ACL
List my_acl_list
saved.",
    "result": 1,
    "command":
"saveacllist"
  }
}
```

Find a function

- WHM API 1 Functions - getresellerips — This function lists a reseller's available IP addresses.
- WHM API 1 Functions - listresellers — This function lists the reseller accounts on the server.

```

Note:
Use WHM's *API Shell* interface (*WHM >> Home >> Development >> API Shell*) to directly test WHM API calls.

Parameters

Parameter	Type	Description	Possible values	Example
`acllist`	*string*	**Required** The ACL to assign to the reseller. **Note:** To modify an existing ACL, set this value to that ACL's name.	A valid ACL name.	`my_acl_list`

- WHM API 1 Functions - setresellerips — This function adds IP addresses to a reseller's account.
- WHM API 0 Functions - setresellermainip — This function assigns a main IP address to a reseller's account.

`acl-viewglobalpackages`	*Boolean*	Whether to allow the reseller to use all global packages. For more information, read our reseller packages documentation. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`

`acl-allow-shell`	*Boolean*	Whether to allow the reseller to create accounts with shell access. This parameter defaults to `0`. **Note:** We added this parameter in cPanel & WHM version 68.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-add-pkg-shell`	*Boolean*	Whether to allow the reseller to create packages with shell access. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-allow-addoncreate`	*Boolean*	Whether to allow the reseller to create packages with addon domains. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-disallow-shell`	*Boolean*	Whether to allow the reseller to create accounts that possess shell access. This parameter defaults to `0`. **Note:** We removed this parameter in cPanel & WHM version 68.	• `1` — Do not allow. • `0` — Allow.	`1`

`acl-allow-parkedcreate`	*Boolean*	Whether to allow the reseller to create packages with parked domains (aliases). This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-allow-unlimited-disk-pkgs`	*Boolean*	Whether to allow the reseller to create packages with unlimited disk space. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-allow-unlimited-pkgs`	*Boolean*	Whether to allow the reseller to create packages with unlimited features. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-allow-unlimited-bw-pkgs`	*Boolean*	Whether to allow the reseller to create packages with unlimited bandwidth. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-add-pkg-ip`	*Boolean*	Whether to allow the reseller to create packages with a dedicated IP address. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-locale-edit`	*Boolean*	Whether to allow the reseller to create and modify locales on the server. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-resftp`	*Boolean*	Whether to allow the reseller to resync FTP passwords. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-restart`	*Boolean*	Whether to allow the reseller to restart services. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`

`acl-status`	*Boolean*	Whether to allow the reseller to view the server's status. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-stats`	*Boolean*	Whether to allow the reseller to view server information. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-quota`	*Boolean*	Whether to allow the reseller to modify quotas. This parameter defaults to `0`. **Warning:** If you do not use resource limits, this privilege allows resellers to circumvent package limits for disk space.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-demo-setup`	*Boolean*	Whether to allow the reseller to enable demo mode for accounts. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-edit-account`	*Boolean*	Whether to allow the reseller to edit accounts. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`

`acl-limit-bandwidth`	*Boolean*	Whether to allow the reseller to modify bandwidth limits (quotas). This parameter defaults to `0`. **Warning:** If you do not use resource limits, a value of `1` allows resellers to circumvent package limits for disk space.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-rearrange-accts`	*Boolean*	Whether to allow the reseller to rearrange accounts. This parameter defaults to `0`.	• `1` — Allow. • `0` — Do not allow.	`1`

`acl-track-email`	*Boolean*	Whether to allow the reseller to view reports about email message delivery attempts from their account. This parameter defaults to `0`. **Note:** We added this parameter in cPanel & WHM version 68.	• `1` — Allow. • `0` — Do not allow.	`1`
`acl-all`	*Boolean*	Whether to grant the reseller **all** privileges. This parameter defaults to `0`. **Warning:** A value of `1` grants `root`-level privileges to the reseller.	• `1` — Allow. • `0` — Do not allow.	`1`

Returns

This function only returns metadata.
