Description

This function prints the contents of a BoxTrapper configuration file or form letter.

Warning:

cPanel API 1 is **deprecated**. We **strongly** recommend that you **do not use** cPanel API 1. However, no equivalent function exists in our newer APIs.

Important:

In cPanel & WHM version 76 and later, when you disable the MailReceiver role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

▼ LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$print_boxtrapper_file =  
$cpanel->apil('BoxTra  
pper',  
'fetchcfgfile',  
array('user@example.c  
om', 'list',  
'black-list.txt'))  
); // Call the  
function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

cPanel Tag System (deprecated)

Warning:

In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel  
Module="BoxTrapper::f  
etchcfgfile(  
$FORM('account','file  
type','cfgfile') )">
```

cPanel API 1 accesses information about cPanel accounts.

Warning: cPanel API **deprecated**. We **strongly** recommend cPanel API or UAPI instead.

Notes:

- The `Fetch` method returns an integer.
- The `Update` method returns a boolean.
