## Description

This function checks whether a directory contains a custom index page.

### Warning:

cPanel API 1 is **deprecated**. We **strongly** recommend that you **do not use** cPanel API 1. However, no equivalent function exists in our newer APIs.

### Important:

In cPanel & WHM version 76 and later, when you disable the `WebServerRole`, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

## Examples

### LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$check_customindex =  
$cpanel->apil('Htacce  
ss', 'getindex',  
array('directoryname'  
, '0') ); // Call the  
function.
```

### Note:

For more information, read our [Guide to the LiveAPI System](#).

## Function information

## About this module

The `Htaccess` module manages functionality within the `.htaccess` file.

## About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

▼ LiveAPI Perl Module

```
my $cpliveapi =
Cpanel::LiveAPI->new(
); # Connect to
cPanel - only do this
once.
my $check_customindex
=
$cpliveapi->apil('Hta
ccess','getindex',
['directoryname','0']
); # Call the
function.
```

**Note:**  
 For more information, read our [Guide to the LiveAPI System](#).

▼ cPanel Tag System (deprecated)

**Warning:**  
 In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel
Module="Htaccess::get
index(
$FORM('dir','indextyp
e') )">
```

**Warning:**  
 cPanel API **deprecate**  
 . We **strongly**  
 recommen  
 cPanel API  
 or  
 UAPI  
 instead.

### Command Line

```
cpapil
--user=username
Htaccess getindex
directoryname 0
```

#### Notes:

- You **must** URI-encode these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the `cpapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapil` command:

```
/usr/local
/cpanel/bin/cpapil
```

### Output (plaintext)

```
checked
```

## Parameters

Parameter	Type	Description	Possible values	Example
dir	string	<b>Required</b> The directory name.	A valid directory name.	directoryname
indextype	integer	<b>Required</b> The type of indexing.	<ul style="list-style-type: none"> <li>• 0 — No indexing.</li> <li>• 1 — Standard indexing.</li> <li>• 2 — Fancy indexing.</li> </ul>	0

## Returns

This function will display `checked` if the directory uses the specified index type.

- [cPanel API 1 Modules - DenyIp](#) — The DenyIp module manages access to IP addresses.
- [cPanel API 1 Functions - DenyIp::adddenyip](#) — This function adds a deny from IP line to the account's .htaccess file.
