Description

This function returns HTML to display an interface to modify the `dohtaccess.html` file.

Warning:

cPanel API 1 is **deprecated**. We **strongly** recommend that you **do not use** cPanel API 1. However, no equivalent function exists in our newer APIs.

Important:

In cPanel & WHM version 76 and later, when you disable the `WebServer` role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

▼ LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$set_index =  
$cpanel->apil('Htaccess', 'htdirls',  
array('directoryname',  
'1') ); // Call the  
function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

Function information

About this module

The `Htaccess` module manages functionality within the `.htaccess` file.

About cPanel API 1

cPanel API 1 accesses information about cPanel accounts.

▼ LiveAPI Perl Module

```
my $cpliveapi =
Cpanel::LiveAPI->new(
); # Connect to
cPanel - only do this
once.
my $set_index =
$cpliveapi->apil('Hta
ccess','htdirs',
['directoryname','1']
); # Call the
function.
```

Note:
For more information, read our [Guide to the LiveAPI System](#).

▼ cPanel Tag System (deprecated)

Warning:
In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel
Module="Htaccess::htd
irls(
$FORM('dir','listtype
') )">
```

Warning:
cPanel API **deprecate**. We **strongly** recommend [cPanel API](#) or [UAPI](#) instead.

▼ Command Line

```
cpapil
--user=username
Htaccess htdirls
directoryname 1
```

Notes:

- You **must** URI-encode these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the `cpapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapil` command:

```
/usr/local
/cpanel/bin/cpapil
```

- cPanel API 1 Modules - DenyIp — The DenyIp module manages access to IP addresses.
- cPanel API 1 Functions - DenyIp::adddenyip — This function adds a deny from IP line to the account's .htaccess file.

Parameters

Parameter	Type	Description	Possible values	Example
-----------	------	-------------	-----------------	---------

- cPanel API 1 Functions - DenyIp: deny ip — This function removes a deny from IP line from the account's .htaccess file.
- cPanel API 1 Functions - Htaccess: checkprotected — This function checks whether the Password Protect feature protects a specified directory.
