

# Server Time

**For cPanel & WHM version 58**

(Home >> Server Configuration >> Server Time)

[Overview](#)

[Set your server's time zone](#)

[Synchronize your server's time with the time server](#)

## Overview

This feature allows you to set your server's time zone and synchronize its time with your network's time server.

### Important

For your cPanel & WHM license to work properly, you must set your server to the correct time.

## Set your server's time zone

To set the time zone on your server, perform the following steps:

1. Select the appropriate time zone from the menu.
2. Click *Change TimeZone*.

### Important:

You can change your time zone via your server's GUI tools, or via the command line interface in the `/etc/localtime` file. However, for the system to reflect the change in the cPanel and WHM interfaces, you **must** restart the `cpsrsvd` daemon. To do this, run the following command as the `root` user:

```
service cpsrsvd restart
```

## Synchronize your server's time with the time server

You may synchronize your server to your network's time server. This is useful if your server's time is incorrect.

To synchronize your server's time with the network time server, click *Sync Time with Time Server*.
