Description

This function uploads files to the server.

Warning:

cPanel API 1 is **deprecated**. Do not use this function. Instead, we **strongly** recommend that you use the following newer functions:

- **UAPI (recommended)** — `Fileman::upload_files` — This function uploads files.
- **cPanel API 2** — `Fileman::uploadfiles` — This function uploads files.

Important:

In cPanel & WHM version 76 and later, when you disable the FileStorage role, the system **disables** this function. For more information, read our [How to Use Server Profiles](#) documentation.

Examples

▼ LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
$upload_files =  
$cpanel->apil('Filema  
n', 'uploadfiles',  
array('public_html',  
'file1-myfile.txt',  
'file2-myotherfile.tx  
t')); // Call the  
function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

Func tion infor mati on

About this mod ule

The Fileman module provides access to file functions.

Note:
This function is part of the File Management feature.

LiveAPI Perl Module

```
my $cpliveapi =
Cpanel::LiveAPI->new(
); # Connect to
cPanel - only do this
once.
my $upload_files =
$cpliveapi->apil('Fileman', 'uploadfiles'
['public_html',
'file1-myfile.txt',
'file2-myotherfile.txt']); # Call the
function.
```

Note:

For more information, read our [Guide to the LiveAPI System](#).

cPanel Tag System (deprecated)

Warning:

In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel
Module="Fileman::uploadfiles (
$FORM('dir','file1','
file2'))">
```

cPanel API 1 accesses information about cPanel accounts.

Warning: cPanel API **deprecated**. We **strongly** recommend [cPanel API](#) or [UAPI](#) instead.

▼ Command Line

```
cpapil
--user=username
Fileman uploadfiles
public_html
file1-myfile.txt
file2-myotherfile.txt
```

Notes:

- You **must** URI-encode these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the `cpapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapil` command:

```
/usr/local
/cpanel/bin/cpapil
```

▼ Output (plaintext)

```
test.html
(test.html): upload
succeeded, overwrote
old file.
```

- [cPanel API 1 Functions - Fileman:html editor](#) — This function opens a file in the HTML editor.
- [cPanel API 1 Functions - Fileman:killdir](#) — This function deletes a directory.

Parameters

Parameter	Type	Description	Possible values	Example
dir	string	Required The directory to which to upload the files.	Any valid directory name.	public_html
file*	string	Required The files to upload.	Any valid, incremented filename.	file1-myfile.txt

Important:
