Site Software

This document is for a previous release of cPanel & WHM. To view our latest documentation, visit our Home page.

For cPanel & WHM 11.44

(Home >> Software/Services >> Site Software)

Overview

The *Site Software* interface allows you to add, manage, upgrade, and remove cPAddons (cPanel Addons), which are software packages that add useful functions to your website. cPAddons are available to help you run blogs, bulletin boards, ecommerce, guest books, and other services.

> **Note**
> Your hosting provider controls which cPAddons are available. If you need an additional cPAddon for your website, contact your hosting provider.

How to manage cPAddons

To toggle whether the system will notify you when updates for your cPAddons are available, click *here*.

To inspect a cPAddon, click the name of the cPAddon. A new window will appear that displays the following information:

- A link to the creator's website, where you can learn more about the cPAddon.
- License terms
- Configuration information, such as an admin username, admin password, installation location, and other settings.

Additional links are available to install, upgrade, and uninstall the cPAddon.

> **Warning:**
> Most cPAddons were created by third-party software developers, not cPanel. For assistance with a cPAddon, contact your hosting provider or the software developer.
