

Search for a License

(Dashboard >> Licenses >> Search for a License)

Overview

This interface allows you to search the licenses in your account. By default, the search results include both active and expired licenses.

Search for a license

To search your licenses, perform the following steps:

1. Select one of the following search types:
 - *Email* — The email address that the server administrator entered in WHM's *Basic WebHost Manager Setup* interface (*WHM >> Home >> Server Configuration >> Basic WebHost Manager Setup*).
 - *Ipregrex (slow)* — A regular expression that represents a portion of the IP address.
 - *Ip* — (default) The license's IP address.
 - *Hostname* — The license's hostname.
 - *Hostnamepartial (slow)* — A regular expression that represents a portion of the license's hostname.
2. Select whether you wish to search for active or expired licenses.
3. Enter any search criteria in the *Search String* text box.
4. Click *Find*.

To clear the search criteria, click *Reset*.

License History

The *License History* section groups your search results by IP address and displays the number of licenses in each group.

Note:

If you previously licensed an IP address, the interface may list multiple entries for a single IP address. For example, if you renewed a license for an IP address several times, the interface will list an entry for each renewal.

You can perform the following actions for each license in the *License History* section:

- Click *Expire* to expire an active license.
- Click *View/Modify* to view or modify license information.

To modify a license's group, click *Edit this group/Reset Group Password* at the bottom of a group of search results.
