

Configure cPanel Analytics

(WHM >> Home >> Server Configuration >> Configure cPanel Analytics)

- [Overview](#)
- [Interface Analytics](#)
- [Additional documentation](#)

Overview

This interface allows you to enable [cPanel Analytics](#) data collection settings. If you enable them, cPanel, L.L.C. will collect anonymized data about user behavior and the server's status.

Note:

The data that we collect via these features allows us to make improvements to cPanel & WHM and better understand our customers. For more information about how we use this data, read our [cPanel Analytics](#) documentation.

Interface Analytics

Interface Analytics collects data about how users navigate through and interact with the cPanel, WHM, and Webmail interfaces.

Click the disabled *Interface Analytics* toggle to enable Interface Analytics server-wide, or, if it is already enabled, click the toggle to disable it.

Note:

After you enable Interface Analytics at the server level, we still do **not** gather data until a user specifically enables data collection for their account.

- Users can enable or disable data collection at the account level via the lightbulb icon (

-) on the right side of each interface.
- WHM users must enable Interface Analytics for their accounts separately, even if their account is the one that enabled it server-wide.
