## Description

This function checks whether the `sslinstall` feature is enabled.

### Warning:

Mail SNI is **not** compatible with Webmail and will **not** function for any Webmail connection. Webmail connections use the cPanel service SSL certificate.

### Note:

In cPanel & WHM version 60 and later, Mail SNI is **always** enabled.

- Functions that enable Mail SNI succeed with a warning that Mail SNI is always enabled.
- Functions that disable Mail SNI fail and make no changes.

## Examples

### cPanel or Webmail Session URL

```
https://hostname.example.com:2083/cpsess##  
#####/execute/SSL/  
is_mail_sni_supported
```

### Note:

This example calls the UAPI function via a cPanel session. For more information, read our [Guide to UAPI](#) documentation.

```

### Note:

For more information, read our [Guide to Template Toolkit](#) documentation.

## Command Line

```
uapi --user=username
SSL
is_mail_sni_supported
```

### Notes:

- You **must** [URI-encode](#) values.
- `username` represents your account-level username.
- For more information and additional output options, read our [Guide to UAPI](#) documentation or run the `uapi --help` command.
- If you run CloudLinux™, you **must** use the full path of the `uapi` command:

```
/usr/local
/cpanel/bin/uapi
```
