

WordPress Manager Change Log

Remember:

We distribute WordPress Manager as a cPanel plugin, and its release schedule is not linked to that of cPanel & WHM.

3.0.4-2

2019-04-23

- Fixed case LC-10146: Update dependency on `wp-cli` to 2.1.0 and updated package name (`cpanel-wp-cli`).

3.0.4

2019-03-01

- Fixed case LC-10402: Stop converting PHP `stderr` output into exceptions.

3.0.3

2019-02-27

- Fixed case LC-9850: Log errors related to Backups and Restore to cPanel Error Log.
- Fixed case LC-9967: Fix error reporting issues on Manage view.
- Fixed case LC-10280: Fix "Detail" link in error messages.

3.0.2

2019-02-04

- Fixed case LC-9708: Detect correct version of PHP to use for WP-CLI.

3.0.1

2019-01-23

- Implemented case LC-9618: Add backup feature to WordPress Manager.
- Implemented case LC-9619: Add restore feature to WordPress Manager.
- Implemented case LC-10121: Add vertical tabs to organize features on the manage view.

2.0.1

2018-11-14

- Fixed case CPANEL-23277: Fixed a problem where WordPress Manager did not display the correct WordPress site URL text.
- Fixed case CPANEL-23275: Fixed a problem where WordPress Manager did not use the correct WordPress site link.

2.0.0-1

2018-06-06

- Fixed case LC-9100: Added the Discovery Site feature to WordPress Manager.
- Fixed case HB-3982: Don't write PHP like it's Perl, as PHP 7.0+ dislikes that.

1.1.6

2018-05-04

- Fixed case LC-9014: Fixed an issue with changing admin passwords with `wp-cli` v1.5.1

1.1.5

2018-04-23

- Fixed case LC-8730: Added demo mode check to the `configure_autoupdate` function.
- Fixed case LC-8724: Fixed a problem where the WordPress Manager *Install* button did not open the Install tab in cPanel's *Site Software* interface. We updated cPanel's *Site Software* interface to a tabbed interface in cPanel & WHM version 72.
- Fixed case LC-8779: Added a feature check to conditionally show or hide the Install button and link, based on the cPanel account's permissions for the WordPress cPAddon feature.
- Fixed case LC-8508: Updated the `/scripts/migrate_legacy_wordpress_to_modern_wordpress` script to exit nonzero on failure.1.1.3

1.1.3

2018-01-18

- Fixed case LC-7733: Update WordPress Manager to convert legacy cPAddons to the RPM-based cPAddon if the user enables Automatic Updates.

1.1.2

2017-12-08

- Fixed case LC-7734: Add the `/scripts/migrate_legacy_wordpress_to_modern_wordpress` script.

1.1.0

2017-07-19

- Fixed case LC-6371: Add controls for configuring WordPress automatic update settings.
- Fixed case LC-7132: Enable password resets for any WordPress administrator.
- Fixed case LC-7249: Update demo mode restrictions for password-related API methods.

1.0.1

2017-07-03

- Fixed case LC-7265: Disable autocompletion using MDN-recommended workaround.
- Fixed case LC-7251: Enable SSL certificate verification for version lookup API.
- Fixed case LC-7263: Add WordPress Manager version number to the page.

1.0

- Initial release
