

Rejected License Requests

(Dashboard >> Licenses >> Rejected License Requests)

Overview

The *Rejected License Requests* interface displays the last 300 license requests that did not sync with the cPanel license server.

License request information

You can view the following information for each rejected license request:

Column	Description
IP	The IP address for the requested license.
Hostname	The hostname for the requested license.
Version	The version of cPanel & WHM for the requested license.
Rejection Reason	The reason why cPanel, L.L.C. rejected the license request.

If no rejected license requests exist, the following message will appear:

There are no Recent License Rejections!
