

Locale XML Download

For cPanel & WHM version 66

(Home >> Locales >> Locale XML Download)

- Overview
- How to download a locale
- Additional documentation

Overview

This interface allows you download an existing locale (language) in XML format. You **must** download the XML file in order to edit the cPanel interface's locale.

How to download a locale

To download a locale, perform the following steps:

1. Select the locale that you wish to download from the *Choose Locale* menu.
2. Click *Download* to download the locale in XLIFF 1.2 (XML Localization Interchange File Format) format.
 - To download the locale in a legacy XML format, click *Download in original "dumper" format*.

Note:

To rebuild your system's list of locales, click *rebuild the locale databases* at the bottom of the interface.
