

Common Mail Service IP Addresses

Overview

Some mail services (for example, Google Apps™) allow customers who own their own domains to relay email through different mail servers. If properly-configured SPF records do not exist for the mail service for these customers' domains, Greylisting may identify them as spam. To prevent this, add these IP addresses and ranges to the *Trusted Hosts* list in WHM's [Greylisting](#) interface (*WHM >> Home >> Email >> Greylisting*).

Common IP addresses and ranges

Note:

We last updated this table in January, 2017.

The following table contains common mail system IP addresses and ranges:

Mail service	IP addresses and ranges
--------------	-------------------------

AOL
