Description

This function uploads an SSL certificate. When you call this function, the system copies the certificate data to the account's `~/ssl/certs` directory.

Warning:

We **strongly** recommend that you use the following [UAPI](#) function instead of this function:

- `SSL::upload_cert` — This function uploads a certificate.

Note:

Due to the limited field length of HTTP GET method calls, you **must** use the HTTP POST method. For this reason, you **cannot** use the WHM API to call this function.

AddonDomain

Examples

LiveAPI PHP Class

```
$cpanel = new  
CPANEL(); // Connect  
to cPanel - only do  
this once.  
  
// Upload an SSL  
certificate.

Note:

For more information, read our [Guide to the LiveAPI System](#).

▼ cPanel Tag System (deprecated)

Warnings:

- In cPanel & WHM version 11.30 and later, cPanel tags are **deprecat ed**. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs. Examples are **only** present in order to help developers move from the old cPanel tag system to our [LiveAPI](#).
- cPanel API 2 calls that use cPanel tags vary in code syntax and in their output.
- For more information, read our [Dep recated cPanel Tag Usage](#) docume ntation.

```

Notes:

- You **must** URI-encode values.
- username represents your account-level username.
- You **must** run the --user=username command.
- For more information and additional output options, read our [Guide to cPanel API 2](#) documentation or run the cpapi2 --help command.
- If you run CloudLinux™, you **must** use the full path of the cpapi2 command:

```
/usr/local
/cpanel/bi
n/cpapi2
```

Output (JSON)

```
{
  "cpanelresult": {
    "apiversion": 2,
    "func":
      "uploadcrt",
    "data": [
      "output":
        example.com
      ],
    "event": {
      "result": 1
    },
    "module": "SSL"
  }
}
```

Note:

Use cPanel's *API Shell* interface (*cPanel >> Home >> Advanced >> API Shell*) to directly test cPanel API calls.
