

Change MySQL User Password

(WHM >> Home >> SQL Services >> Change MySQL User Password)

[Overview](#)
[Change password](#)
[Additional documentation](#)

Overview

This interface allows you to change a database user's password. Because this feature does not require the old password, it is useful if a user forgets a password or attackers compromise the account.

Change password

To change a password, perform the following steps:

1. Select the user from the *MySQL User* menu.
2. Enter and confirm the new password in the appropriate text boxes.

Notes:

- The system evaluates the password that you enter on a scale of 100 points. 0 indicates a weak password, while 100 indicates a very secure password.
- Some web hosts require a minimum password strength. A green password *Strength* meter indicates that the password is equal to or greater than the required password strength.
- Click *Password Generator* to generate a strong password. For more information, read our [Password & Security](#) documentation.

3. Click *Change Password*.
