

# Installer Change Log

## 00089

---

2019-04-18

- Fixed case CPANEL-26339: Improved pre-install hostname validation.
- Fixed case CPANEL-26589: Pre-download packages instead of preinstall.
- Fixed case CPANEL-26697: Resolve race condition in bootstrap\_cpanel\_perl.

## 00088

---

2019-03-27

- Fixed case CPANEL-25972: Reduce number of packages installs for v79 and later.
- Fixed case CPANEL-26165: Prevent installer from calling get\_lts\_version before wget is installed.
- Fixed case CPANEL-26197: Ensure we do not block installs on systems without a pre-configured mysql version.
- Implemented case CPANEL-26034: Require at least MySQL 5.6 when installing v80.

## 00085

---

2019-03-05

- Fixed case CPANEL-25787: Ensure installer handles minor versions for c7+
- Fixed case CPANEL-25803: /var/cpanel/logs
- Fixed case CPANEL-25842: Ensure /root/installer.lock is removed.
- Fixed case CPANEL-25853: Ensure we update to CentOS 7.4+ if the version is too old

## 00084

---

2019-02-20

- Fixed case CPANEL-20431: Resolve issue preventing installation on registered RHEL 7 machines with optional repositories properly enabled.
- Fixed case CPANEL-21816: Improve install script to check for license type.
- Fixed case CPANEL-21982: Provide a command line option to skip license check.
- Fixed case CPANEL-22183: Switch default DNSONLY tier from stable to release
- Fixed case CPANEL-22218: Ensure --skip-cloudlinux works for DNSONLY.
- Fixed case CPANEL-22222: Update endpoint for checking existing active licenses.
- Fixed case CPANEL-22252: Use product type from verify to determine if dnsonly/cpanel install is valid.
- Fixed case CPANEL-22355: Fix script command line argument concatenation.
- Fixed case CPANEL-25348: Defer initial yum update when the install target is supported.
- Fixed case CPANEL-25349: Minimize yum calls during cPanel install.
- Fixed case CPANEL-25352: Remove Red Hat 5 logic from the cPanel installer.
- Fixed case CPANEL-25352: Block installation of cPanel versions below 70.
- Fixed case CPANEL-25352: Fix Red Hat 6 EOL warning.
- Fixed case CPANEL-25370: Ensure rdate is called after ensure\_rpms\_installed.
- Fixed case CPANEL-25417: Preinstall packages while waiting for updatenow.
- Fixed case CPANEL-25427: Make gpg key download more resilient.
- Fixed case CPANEL-25527: Ensure wget and rdate are installed.
- Fixed case CPANEL-25579: Fix parsing of rpm release file.
- Fixed case CPANEL-25681: Fix race condition where gpg keys are removed from a child process.

## 00075

---

2018-06-27

- Fixed case CPANEL-21096: Ensure the skipapache and skipreposit setup switches are passed through properly.

## 00074

---

2018-06-13

- Fixed case CPANEL-18732: Inform customers of impending EOL date during installation.
- Fixed case CPANEL-20648: Bootstrap cPanel Perl if possible.
- Fixed case CPANEL-20796: Add option to skip EasyApache YUM repo setup.
- Fixed case CPANEL-20938: Refer to major versions, not LTS versions.

## 00071

---

2018-01-25

- Fixed case CPANEL-17070: Add masked to non-enabled NetworkManager systemctl states.
- Fixed case CPANEL-17295: Install xz before running updatenow.static.
- Fixed case CPANEL-17627: Update hostname check in installer.
- Fixed case CPANEL-17872: Bypass Socket::getnameinfo() if the macro is not available.
- Fixed case CPANEL-17959: Remove installer requirement for IPv6 support.
- Fixed case CPANEL-17961: Fix uninitialized value warning in hostname check for CentOS 6.

## 00069

---

2017-11-21

- Fixed case CPANEL-16657: Provide a link on how to disable Network Manager.
- Fixed case CPANEL-16721: Check for /etc/fstab.
- Fixed case CPANEL-16721: Remove text implying we still support CentOS 5.
- Fixed case CPANEL-16722: Drop "11." from new version numbers.
- Fixed case CPANEL-16722: Disallow installation of versions prior to 62.

## 00068

---

2017-10-19

- Fixed case CPANEL-12720: Have the installer exit early if NetworkManager is active.
- Fixed case CPANEL-15893: Account for removal state before systemd daemon reload.
- Fixed case CPANEL-15903: Add a --skip-cloudlinux option.
- Fixed case CPANEL-16445: Don't install kernel-headers on CentOS Plus equipped systems.

## 00066

---

2017-08-31

- Fixed case CPANEL-14553: Abort early if trying to install over existing system.
- Fixed case CPANEL-14653: Add an ASCII art logo for non-color installs as well.

## 00063

---

2017-05-22

- Fixed case CPANEL-11269: Ensure installer works when non-English languages already set.
- Fixed case CPANEL-12543: Block installations on CentOS 5.
- Fixed case CPANEL-13136: Fix reading from /dev/null when running commands.

## 00061

---

2017-01-25

- Fixed case CPANEL-10971: Temporarily loosen IPv6 check.

## 00060

---

2016-11-29

- Fixed case CPANEL-9340: Restore Red Hat subscription checks.
- Fixed case CPANEL-9666: Ensure that the kernel has basic IPv6 support.

## 00059

---

2016-09-29

- Fixed case CPANEL-8142: Fix capitalization of "cPanel & WHM".
- Fixed case CPANEL-8635: Verify that non-localhost resolver exists before running install.
- Fixed case CPANEL-8676: Remote portreserve on install.

## 00058

---

2016-08-31

- Fixed case CPANEL-2408: Remove extra RedHat subscription checks.
- Fixed case CPANEL-8050: Better arch resolution logic on Amazon x86\_64.
- Fixed case CPANEL-8059: Don't allow the user to install versions older than 11.52.
- Fixed case CPANEL-8059: Always default signing to on.

## 00057

---

2016-08-18

- Implemented case CPANEL-7565: Modify installer to not create x3 and x3mail directories.

## 00056

---

2016-07-19

- Fixed case CPANEL-7455: Encourage CentOS 6 users to use CentOS 7.
- Fixed case CPANEL-7463: Improve error message when /var/lib/mysql is present.
- Fixed case CPANEL-7463: Ignore lost+found for MySQL check.

## 00055

---

2016-06-07

- Fixed case CPANEL-5859: Improve hostname check, and provide instructions for updating hostname.
- Fixed case CPANEL-6464: Ensure we can run the installer on CloudLinux 5.
- Fixed case CPANEL-6585: Fix architecture detection for 11.58.

## 00053

---

2016-06-07

- Fixed case CPANEL-3637: Disable Wget DNS cache.
- Fixed case CPANEL-3637: Remove code for RHEL and CentOS 4.
- Fixed case CPANEL-4713: Remove proxy detection.
- Fixed case CPANEL-5576: Recommend using CentOS 7.
- Fixed case CPANEL-5576: Refuse to install 57 or newer on unsupported OS.
- Fixed case CPANEL-5871: Don't try to run /scripts/rdate.

## 00045

---

2015-07-08

- Fixed case 195757: Remove EPEL exim RPM on install.

## 00044

---

2015-06

- Fixed case 184865: Do not remove cpanel- RPMs if the install aborted and you need to re-run it.
- Fixed case 187049: Fix typo with installer lock file.
- Fixed case 189141: Installer should list CentOS 7 as a valid system.
- Implemented case 184665: Installer should advertise 11.50+ support for CentOS 7.
- Implemented case 188765: Allow unsupported runlevels with --force.
- Implemented case 189509: Check minimum amount of memory requirement.
