

Tweak Settings - Development

This documentation is for a previous release of cPanel & WHM. To view our latest documentation, visit our [Home page](#).

For cPanel & WHM 54

([Home](#) >> [Server Configuration](#) >> [Tweak Settings](#))

[Standardized Hooks - Debug Mode](#)

Standardized Hooks - Debug Mode

The Standardized Hooks System's debug mode helps to troubleshoot hook issues.

The following options are available:

- *Debug mode is off.* — The system does not display debug information or log it to the error log.
- *Debug mode is on.* The system displays information about a hook while it executes, but does **not** log debug data to the error log.
- *Debug mode is on.* The system displays information about a hook while it executes **and** logs debug data to the error log.

Important:

This setting outputs a **large** amount of data.

- *Debug mode is on.* The system displays information about every stage for every hookable event, even if no hooks exist for that stage.

This setting defaults to *Debug mode is off*.
