cPanel Tag System (deprecated)

Warning:

In cPanel & WHM version 11.30 and later, cPanel tags are **deprecated**. We provide this example to help developers move from the old cPanel tag system to our [LiveAPI](#) system. We **strongly** recommend that you **only** use the [LiveAPI](#) system to call the cPanel APIs.

```
<cpanel
Module="Resellers::themelistopt(">
```

Command Line

```
cpapil
--user=username
Resellers
themelistopt
```

Notes:

- You **must** [URI-encode](#) these values.
- username represents your account-level username.
- For more information and additional output options, read our [Guide to cPanel API 1](#) documentation or run the `cpapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `cpapil` command:

```
/usr/local
/cpanel/bin/cpapil
```

Output (HTML)

```
<option
selected="selected"
value="paper_lantern"
>paper_lantern</option>
```

Warning:
cPanel API deprecated. We **strongly** recommend [cPanel API](#) or [UAPI](#) instead.
