

# Migration Script Change Log

## 7.20

---

**2018-03-28**

- Fixed case CPANEL-18856: Alter the shabang line for pkgacct scripts to avoid PERL5LIB.

## 7.19

---

**2018-03-06**

- Fixed case CPANEL-16325: pkgacct-pXa: ensure email accounts with capitals transfer.
- Fixed case CPANEL-17706: Emit account creation date in cpuser file.

## 7.18

---

**2017-11-28**

- Fixed case CPANEL-12428: Read psa.conf for mail directory.
- Fixed case CPANEL-16216: Add MySQL 5.7 support.

## 7.17

---

**2017-10-26**

- Fixed case CPANEL-16540: Plesk: More precise email address capture.

## 7.16

---

**2017-09-14**

- Fixed case CPANEL-11969: pkgacct-pXa: fix packaging under MySQL 5.7.
- Fixed case CPANEL-12550: Update pkgacct repository to use Filesys::POSIX 0.9.19.
- Fixed case CPANEL-12658: pkgacct-da: package SSL keys and certs properly.

## 7.15

---

**2017-04-20**

- Fixed case CPANEL-7506: Copy autoresponders.
- Fixed case CPANEL-7506: Lowercase charset in autoresponder headers.
- Fixed case CPANEL-7506: Correct autoresponder subject lines.
- Fixed case CPANEL-7506: Use % instead of < and > in autoresponder subjects.
- Fixed case CPANEL-7506: Lowercase autoresponder filenames.
- Fixed case CPANEL-12456: Plesk 9.x: Only copy subdomains of domains.
- Fixed case CPANEL-12529: Capture MySQL triggers and routines.
- Fixed case CPANEL-12593: Plesk: Skip "no-hosting" parked domains.

## 7.14

---

**2017-04-05**

- Fixed case CPANEL-256: Plesk: Consolidate duplicated code.
- Fixed case CPANEL-256: Plesk: Default to Paper Lantern.
- Fixed case CPANEL-310: Remove Alabanza detection and support libs.
- Fixed case CPANEL-1607: Update username validation code.
- Fixed case CPANEL-1619: Ensim: discard STDERR from sitelookup.
- Fixed case CPANEL-1694: Plesk, DA: Create /root/.my.cnf first.
- Fixed case CPANEL-6908: Plesk: Always create email quota file.
- Fixed case CPANEL-7467: Fix query for MySQL users in DirectAdmin.
- Fixed case CPANEL-7614: Plesk: Capture contact email address.
- Fixed case CPANEL-7903: Fix addon domain imports from DirectAdmin.
- Fixed case CPANEL-9026: DirectAdmin: Always create email quota file.
- Fixed case CPANEL-9915: Ensure Plesk 9 subdomain content ends up in homedir/public\_html in cpmove file.
- Fixed case CPANEL-10077: Remove lockacct functionality.
- Fixed case CPANEL-10077: Drop privileges when reading files under the user's control.
- Fixed case CPANEL-10304: Support Plesk 17.
- Fixed case CPANEL-12305: Fix email enXim mail transfers.
- Fixed case PEG-6: Plesk: --skipmail should still collect accounts.
- Fixed case PEG-6: Plesk: add missing method clean\_template\_name.
- Implemented case FB-49884: DA: Capture user contact email address.

## 7.7

---

**2015-07-01**

- Fixed case 192081: Plesk: Work with MySQL 5.6.
- Implemented case 154917: No more Frontpage.
- Implemented case 154917: Plesk: No more Frontpage.
- Implemented case 154917: Ensim: No more Frontpage.
- Implemented case 154917: DirectAdmin: No more Frontpage.

## 7.6.3

---

**2015-06-16**

- Fixed case 188749: Plesk: Capture Horde shares.
- Fixed case 188749: Plesk: Capture Horde data for all user's domains.
- Fixed case 188749: Plesk: Make pkgacct-pXa an actual modulino.
- Fixed case 191729: Augment --help.

## 7.6.2

---

**2015-05-11**

- Fixed case 185981: Ignore failures to create FTP homedirs.
- Fixed case 188365: DA: Copy email accounts with \_ in passwd hash.
- Implemented case 129793: POD for dump\_database.
- Implemented case 187881: DA: Warn when skipping an email address:.

## 7.6.1

---

**2015-05-07**

- Fixed case 96261: DirectAdmin: add --skipbackups.
- Fixed case 186589: Plesk 12: Web stats gathering.
- Fixed case 188085: DA: Don't skip valid email accounts.

## 7.6

---

---

## 2015-04-20

- Fixed case 185517: Plesk: Fix undefined method error for resellers.
- Implemented case 185285: Disallow /etc/allowstupidstuff for usernames.
- Implemented case 185285: Move functions to Cpanel::Validate::Username::Core.
- Implemented case 185285: Move functions to Cpanel::Validate::Username::Mode.
- Implemented case 185285: Update Cpanel::Validate::Username.
- Implemented case 185285: Refactor Cpanel::Validate::Username to be sensible.
- Implemented case 185285: Always run username validation in transfer mode.

## 7.5.9

---

### 2015-04-13

- Fixed case 184765: Plesk: Initialize logger before trying to use it.

## 7.5.8

---

### 2015-04-09

- Fixed case 71389: DA: db usernames with hyphens.

## 7.5.7

---

### 2015-03-27

- Fixed case 69881: Add Maildir support and --skipmail option.
- Fixed case 69881: Remove old-style hooks from pkgacct-enXim.
- Fixed case 69881: Unify call\_hook into Cpanel::Pkgacct::Util.
- Fixed case 152529: Don't leave empty log files behind on failure.
- Fixed case 153885: Handle default Plesk limits.
- Fixed case 178781: Remove support for unused scripts.

## 7.5.6

---

### 2015-03-18

- Fixed case 173421: Fix warning in get\_subdomains; cleanups.
- Fixed case 173421: Check /etc/psa/psa.conf for Plesk 9 docroot paths.

## 7.5.5

---

### 2015-03-11

- Fixed case 160477: Expunge Plesk docroots during packaging.
- Fixed case 160545: Plesk: Name subdomains by FQDN.
- Fixed case 168213: Send MySQL errors to the log.
- Fixed case 173405: Plesk 9 addon domains: Do nothing, correctly.
- Implemented case 150465: Refactor pkgacct-pXa: FTP users.
- Implemented case 150465: Refactor pkgacct-pXa: Account basics.
- Implemented case 150465: Refactor pkgacct-pXa: Account limits; cpuser file.
- Implemented case 150465: Refactor pkgacct-pXa: Home Directory.

## 7.5.4

---

2015-02-26

- Fixed case 161237: Plesk: Don't copy forwarding domains.
- Implemented case 150465: Refactor pkgacct-pXa: SSL Certs.
- Implemented case 150465: Refactor pkgacct-pXa: getpwnam; reseller behavior.
- Implemented case 150465: Refactor pkgacct-pXa: Plesk DB access.
- Implemented case 150465: Refactor pkgacct-pXa: Mailing lists.
- Implemented case 150465: Refactor pkgacct-pXa: Subdomains.
- Implemented case 150465: Refactor pkgacct-pXa: domain\_name.
- Implemented case 150465: Refactor pkgacct-pXa: Frontpage.
- Implemented case 150465: Refactor pkgacct-pXa: Addon domains.
- Implemented case 150465: Refactor pkgacct-pXa: Password salt.
- Implemented case 150465: Refactor pkgacct-pXa: Web statistics.
- Implemented case 150465: Refactor pkgacct-pXa: Copy autoresponders.
- Implemented case 150465: Refactor pkgacct-pXa: Parked and Alias domains.
- Implemented case 150465: Refactor pkgacct-pXa: MySQL Databases.
- Implemented case 150465: Refactor pkgacct-pXa: Version Identification.
- Implemented case 150465: Refactor pkgacct-pXa: Mail.
- Implemented case 150465: Refactor pkgacct-pXa: Horde database tables.
- Implemented case 150465: Refactor pkgacct-pXa: 13 semi-global variables.
- Implemented case 150465: Refactor pkgacct-pXa: new() as an initializer.
- Implemented case 150465: Refactor pkgacct-pXa: DNS Zones.
- Implemented case 150465: Refactor pkgacct-pXa: PostgreSQL databases.

---

## 7.5.3

2015-01-30

- Fixed case 155993: Plesk: Correct capture of std\_fwd addons.

---

## 7.5.2

2015-01-15

- Fixed case 154513: Ensim: Generate correctly-named archives.
- Implemented case 58137: Add --skipdocroots to pkgacct-da.

---

## 7.5.1

2015-01-13

- Fixed case 150801: Add --skipmail for Plesk.
- Fixed case 153785: Allow long usernames again.

---

## 7.5

2015-01-05

- Fixed case 102857: Use 'unlimited' for invalid quota sizes.
- Fixed case 134961: Update Cpanel::Validate::Username.
- Implemented case 104121: Correct parked domain capture for Plesk 10+.
- Implemented case 104121: Capture "standard forwarding" domains.
- Implemented case 117009: Allow skipping emails for DirectAdmin.

---

## 7.4.1

2015-01-05

- Fixed case 150369: Fix mail capture for DirectAdmin.

## 7.4

---

2014-10-29

- Fixed case 47220: Resolve subdomain symlinks.
- Fixed case 69421: Prevent errors from missing bandwidth data.
- Fixed case 114549: Validate data from passwd files.
- Fixed case 114549: Handle ~/Maildir's absence.
- Fixed case 118021: Calculate MD5 sums on cpmove archives on the fly.
- Fixed case 119509: Allow transfer of Ensim accounts with non unique user names.
- Fixed case 123117: DA: Merge mail directories.
- Fixed case 126069: Discard STDERR from mysqldump.

### 7.3.1

---

2014-10-29

- Fixed case 58191: Create mail account symlinks.
- Fixed case 64396: Support wildcard subdomains in pkgacct-pXa.
- Fixed case 72873: Proper pkgacct pidfile processing.
- [security] Fixed case 77941: Fix arbitrary file overwrite.
- [security] Fixed case 102501: Fix permissions on tarball files for foreign transfers.
- Fixed case 107681: Plesk 12 permitted.
- Fixed case 111953: Get account owner correctly on Plesk 10+.
- Fixed case 112201: Implement account locking.
- Fixed case 114289: Plesk 9: Document root is always \$homedir/httpdocs.
- Fixed case 114357: Ignore EEXIST errors for nested docroots.
- Implemented case 57969: Die() if archiving account when not root.
- Implemented case 59324: Remove Sphera migration script.
- Implemented case 75913: Fix handling of mailboxes for Plesk.
- Implemented case 107781: Use PSA database to determine document roots.

## 7.3

---

2014-05-27

- Updated PUBLIC to 7.3.
