

EasyApache 3.28 Release Notes

Aug 16, 2018 07:31

New features

Warning:

The following new features are available **only** if you have one of the following cPanel & WHM versions:

- cPanel & WHM version 11.40.1.16
- cPanel & WHM version 11.42.1.19
- cPanel & WHM version 11.44.0.8
- All builds of cPanel & WHM version 11.46
- All builds of cPanel & WHM version 11.48

Mysqlnd release advisory

In EasyApache 3.28.0 and later, PHP will compile with the MySQL native drive, `mysqlnd`, when used with either MariaDB 10+ or MySQL 5.6+. Users with old-style `mysql` passwords will no longer be able to authenticate. This should have minimal affect on most users. If a site is unable to authenticate after this update, you must reset the MySQL user's password in the *Change MySQL User Password* interface (*Home >> SQL Services > Change MySQL User Password*) of WHM.

Apache 2.4 profile default

In EasyApache 3.28.9 and later, EasyApache uses Apache 2.4 by default for new installations of cPanel & WHM. If you want to install Apache 2.2 on a new installation, you **must** use a custom profile.

CentOS 7

Apache 2.2 is not available on servers that run CentOS 7.

Modified or updated features

Mod Security

WHM versions 11.44 and earlier include very basic ModSecurity rules. You must update these rules with the WHM *Mod Security* interface (*Home >> Plugins >> Mod Security*).

WHM versions 11.46 and later do not include any ModSecurity rules. You must configure your rules with the WHM *ModSecurity Tools* interface (*Home >> Security Center >> ModSecurity Tools*).

PHP 5.5

The latest version of PHP is 5.5.24

PHP 5.4

The latest version of PHP is 5.4.40

Apache 2.4

The latest version of Apache is 2.4.12

Tomcat

Tomcat is unavailable on CentOS 7 builds. It remains available on other builds.
