

Transfer a license

(Dashboard >> Licenses >> Transfer a license)

Overview

The *Transfer a license* interface allows you to transfer an active license from the current IP address to a new IP address.

Note:

If no active licenses exist on the current IP address, you **cannot** transfer a license.

Transfer a license

To transfer a license, perform the following steps:

1. Enter the IP address that you want to transfer the license **from** in the *Old IP* text box.
2. Enter the IP address that you want to transfer the license **to** in the *New IP* text box.
3. Click *Transfer IP* to complete the transfer.

Note:

If the new IP address is currently licensed or was previously licensed, the system will **not** allow the transfer.

A confirmation interface will appear with the following information:

- A message of success.
- <http://verify.cpanel.net> — Click this link to view the license status of the new IP address.
- *Reverse the Transfer* — Click this link to undo the transfer.

Note:

This interface displays any problems encountered if the system attempts to reverse the license transfer.

For more information about license transfers, read our [Add License](#) documentation.
