Description

This function lists the restoration queue's completed tasks.

Important:

This function's output varies dramatically. The method that added the restoration task determines this output.

Note:

On servers that run CentOS 7, you may see a named warning about the absence of SPF resource records on DNS.

- This warning is **not** relevant on CentOS 7 servers, because [RFC 7208 deprecated SPF records](#). CentOS 7 servers use TXT records instead of SPF records.
- Red Hat 7.1 and CentOS 7.1 both contain `bind-9.9.4-23.el7`, which is an updated version of BIND that complies with RFC 7208. To resolve this issue, update your operating system to a version that contains the updated version of BIND. For more information, read the [Red Hat Bugzilla case about SPF record errors](#).

Examples

```
https://hostname.example.com:2087/cpsess#####/json-api/restore_queue_list_active?api.version=1
```

```
https://hostname.example.com:2087/cpsess#####/xml-api/restore_queue_list_active?api.version=1
```

```
whmapil restore_queue_list_active
```

Notes:

- Unless otherwise noted, you **must** [URI-encode](#) values.
- For more information and additional output options, read our [Guide to WHM API 1](#) documentation or run the `whmapil --help` command.
- If you run CloudLinux™, you **must** use the full path of the `whmapil` command:

```
/usr/local/cpanel/bin/whmapil
```

```
{
  "data": {
    "restore_job": [
      {
        "status_info": {
          "log": "Extracting Domain...Done\n"
        }
      }
    ]
  }
}
Done\n
```

Function information

API Version:
WHM API 1
Available in:
WHM 11.38+
Methods:
GET, POST
Required Parameters:
(none)
Return Format:
JSON, XML

Important:

cPanel & WHM version 66 **deprecated** XML output.

About WHM API 1

WHM API 1 performs functions and accesses data in WHM.

Parameters

This function does not accept parameters.

Returns

Return	Type	Description	Possible values	Example
restore_job	<i>array of hashes</i>	An array of hashes that contain information about a completed task in the restoration queue.	This array of hashes includes the <code>status_info</code> and <code>restore_job</code> hashes.	
status_info	<i>hash</i>	A hash of information about the task's status. The function returns this hash in the <code>restore_job</code> array.	This hash includes the <code>log</code> , <code>started</code> , <code>finished</code> , and <code>result</code> returns.
